Dynamic approach to risk across a range of economic and geopolitical cycles which leverages proprietary insights to identify strong governance and business sustainability in higher risk markets

● Operational Expertise

Comprehensive operational and trading expertise developed over 30+years in opaque and complex public markets

● Aligned With You

Commitment to achieving investment excellence from investment performance and deep insights to provide investment context

Proven Active Performance

High Conviction

Highly Active

Highly Effective

The performance, active share, and holdings data presented are of a representative portfolio across all composites managed by Matthews. Average name turnover figures represent data for U.S. registered pooled vehicles only. The performance results are net of advisory and other fees. **Past performance is no guarantee of future results, which may vary.** Indices are unmanaged and shown for comparative purposes only. It is not possible to invest directly in an index. Matthews' products and services are publicly registered or available in certain jurisdictions only. A list of composite descriptions, a list of limited distributed pooled fund descriptions, and a list of broad description pooled funds are available upon request. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. Performance, Holdings and Active Share data as of March 31, 2024; Name turnover as of December 31, 2023.

Active Share is calculated by taking the absolute value of the difference between portfolio holdings and benchmark weights, summing all of these differences, and dividing by two. The calculation will result in an active share number between 0%, which indicates the portfolio perfectly replicates the benchmark, and 100%, which indicates there is no overlap whatsoever between the portfolio and the index.

Do not give, show or quote to any other person. This document is not for public distribution and is for institutional/professional investors use only and has not been registered with, approved by, any regulatory authority in any jurisdiction.

Matthews

Investment Philosophy

Asian equity markets offer investors attractive long-term growth opportunities but are inherently volatile and idiosyncratic requiring:

- Extensive **on-the-ground research** that results in proven company discovery and core / opportunistic investment opportunities
- An investment framework that combines **country analysis** with **bottom-up research** to generate differentiated and diversified alpha
- A **disciplined** and **repeatable** approach to portfolio construction that can adapt underlying exposure to evolving market conditions
- A deep understanding **performance drivers** in emerging markets: 1) earnings; 2) dividends; 3) valuations; 4) currency
- **Strong risk control** to manage stock, sector and country exposures in the portfolio and make active intentional risk decisions that contribute to generating compelling risk-adjusted returns

Parameters set by Matthews are subject to change. The statements above are based on the beliefs and assumptions of our portfolio management team and on the information currently available to our team at the time of such statements. Although we believe that the expectations reflected in these statements are reasonable, we can give no assurance that these expectations will prove to be correct.

Do not give, show or quote to any other person. This document is not for public distribution and is for institutional/professional investors use only and has not been registered with, approved by, any regulatory authority in any jurisdiction.

Fundamental Analysis Drives Stock Selection

Comprehensive forward-looking quantitative & qualitative assessment

Disciplined Buy/ Sell Decisions

DECISION FACTORS

Buy

How does a stock get into a portfolio?

- Bottom-up, fundamental analysis
- Macroeconomic awareness incorporated to fundamental research effort
- Event-driven stock – a stock that has fallen a long way and provides a potential value opportunity

Sell

Why do we sell a stock?

- Fundamental investment thesis played out, target price reached
- Macroeconomics / geopolitics impacts stock fundamentals
- Loss long-term competitive advantage
- Better relative opportunity

Adjustment

- Intact investment thesis but change in degree of conviction
- Valuation adjustment
- Geopolitical/macroeconomic event

MAP RECOMMENDATION LISTS (EXAMPLES)

China	Market Value %	Target Price +/-	Buy/Hold Comments	
Security 1	6.1%	15.0%	BUY	Exciting growth outlook
Security 2	5.1%	7.0%	HOLD	Core holding
Security 3	2.8%	9.0%	HOLD	Core holding
Security 4	2.4%	7.5%	HOLD	Thematic exposure

Dedicated Investment Risk Management

Combination of dynamic risk management framework and active management

SECURITY LEVEL RISK MANAGEMENT

- Fundamental research with detailed financial models.
- Monitor essential attributes such as free cash flow, return-on-equity, leverage and liquidity.
- Ongoing engagement with companies and management teams.
- Analyze material sustainability/ESG metrics and compare with third-party data to provide supplemental documentation.
- No limit on idiosyncratic risk within allocated risk budget.

PORTFOLIO LEVEL RISK MANAGEMENT

- Monitor active risk ; typically, 2-8% active primarily driven from stock selection and secondarily from country and sector allocation.
- Discuss macro risk to capture best risk/reward opportunities by market.
- Closely observe factor and style risks.
- Monitoring country, sector, and industry diversification; allowing up to +/- 10% deviation per country and sector vs index.
- Ensure portfolio level liquidity : 95%+ of portfolio to be liquidated in a day as of September 30, 2023 based on 30% market participation rate.

INDEPENDENT LEVEL RISK MANAGEMENT

- Independent risk analytics team with detailed monthly risk report looking at risk budgeting, style risk (factor tilts), active weight limits, liquidity, asset level risk, tail risk and ESG risk.
- Set thresholds for acceptable range of risk and requires action if severely out of range.
- Monthly discussions with other quality growth style PMs.
- Toolkit includes FactSet, Axioma Risk Model, Bloomberg Risk Model, and proprietary techniques.

COMPLIANCE

- Monitors portfolio compliance with client investment guidelines.
- Track regulatory changes that might impact trading, purchase and sales of securities.
- Identify, monitor and mitigate risks including those associated with investments in emerging markets securities/regions as well as other operational, investment and strategic risks.

The portfolio risk management process represents an effort to monitor and manage risk but does not imply low risk.

Do not give, show or quote to any other person. This document is not for public distribution and is for institutional/professional investors use only and has not been registered with, approved by, any regulatory authority in any jurisdiction.

Matthews China Fund

Investing in Chinese securities involve risks. Heightened risks related to the regulatory environment and the potential actions by the Chinese government could negatively impact performance. Investments involve risks, including possible loss of principal. Investments in international, emerging and frontier markets involve risks such as economic, social and political instability, market illiquidity, currency fluctuations, high levels of volatility, and limited regulation, which may adversely affect the value of the Fund's assets. Additionally, investing in emerging and frontier securities involves greater risks than investing in securities of developed markets, as issuers in these countries generally disclose less financial and other information publicly or restrict access to certain information from review by non-domestic authorities. Emerging and frontier markets tend to have less stringent and less uniform accounting, auditing and financial reporting standards, limited regulatory or governmental oversight, and limited investor protection or rights to take action against issuers, resulting in potential material risks to investors.

Investing in small- and mid-size companies is more risky than investing in larger companies as they may be more volatile and less liquid than large companies. In addition, single-country funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic location. Pandemics and other public health emergencies can result in market volatility and disruption.

Do not give, show or quote to any other person. This document is not for public distribution and is for institutional/professional investors use only and has not been registered with, approved by, any regulatory authority in any jurisdiction.

Matthews China Fund Investment Philosophy

All share approach

- Fund invests in mainland China-listed equity both in HK and on the mainland
- No current exposure to Taiwan

Fundamentally oriented and long-term focused

- Fundamental bottom-up stock selection with a focus on long-term value and cash flow
- GARP* is core philosophy
- Companies with sustainable competitive advantage
- Operational management performance is reflected in consistent superior metrics

Concentrated, high conviction portfolio

- Basic belief that fewer stocks within the portfolio enhances research depth (and conviction) while seeking to mitigate the risk of stock selection mistakes

Tactical segment that seeks to capture earnings with cyclical exposure

- Not all stocks have long-term cash flow predictability—creating a need for a shorter-term investment horizon for a small percentage of the portfolio
-

*GARP=Growth at a Reasonable Price

The statements above are based on the beliefs and assumptions of our portfolio management team and on the information currently available to our team at the time of such statements. Although we believe that the expectations reflected in these statements are reasonable, we can give no assurance that these expectations will prove to be correct.

Do not give, show or quote to any other person. This document is not for public distribution and is for institutional/professional investors use only and has not been registered with, approved by, any regulatory authority in any jurisdiction.

China's Growth is Led by "New Economy" Sectors

China's economic shift from manufacturing to services is well underway

SHARE OF GDP BY PRODUCTION APPROACH

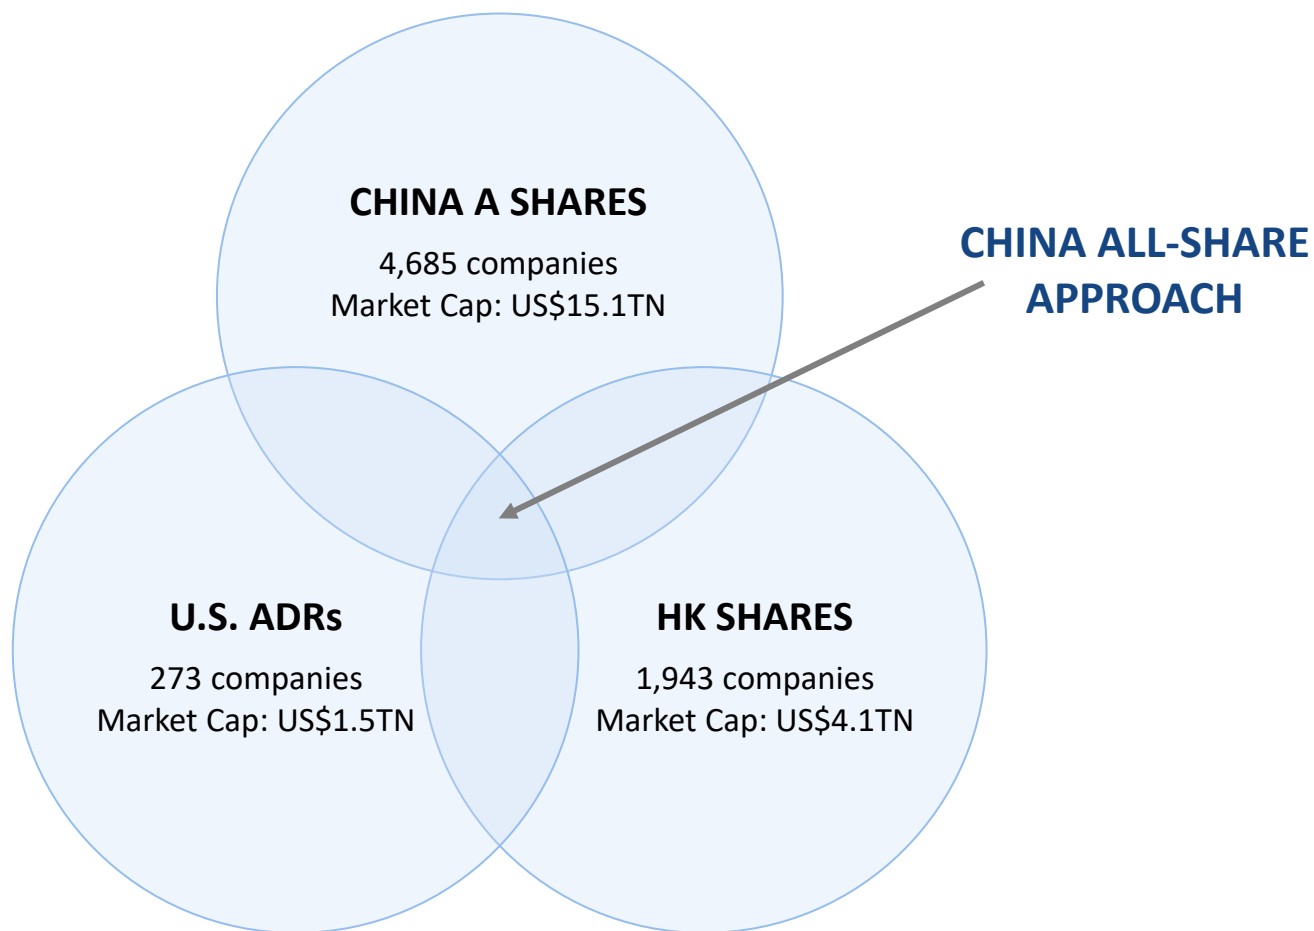

- **Primary industry** refers to agriculture, forestry, animal husbandry and fishery and services in support of these industries
- **Secondary industry** refers to mining and quarrying, manufacturing, production and supply of electricity, water and gas, and construction
- **Tertiary industry** refers to all other economic activities not included in the primary or secondary industries, including real estate, finance, wholesale and retail, transportation and other service industries

We Believe in an All-Share Approach to Investing in China

The Chinese equity investment universe comprises various share listings

Universe of Chinese companies with market cap greater than US\$50 million. 2021 data includes A-shares

Matthews

Portfolio Construction and Monitoring

PORTFOLIO CONSTRUCTION

GROWTH SEEKING

- Focused on growth that is:
 - structural
 - long term
 - sustainable
 - high quality
- Future growth opportunities

CORE PORTFOLIO

- Long-term cash flow predictability**
Tend to prefer domestically oriented companies (e.g. companies in service sectors)
- Internet/E-Commerce
 - Health care
 - Life insurance
 - Logistics
 - New Energy
 - Semiconductor
 - Software

CYCLICAL GROWTH

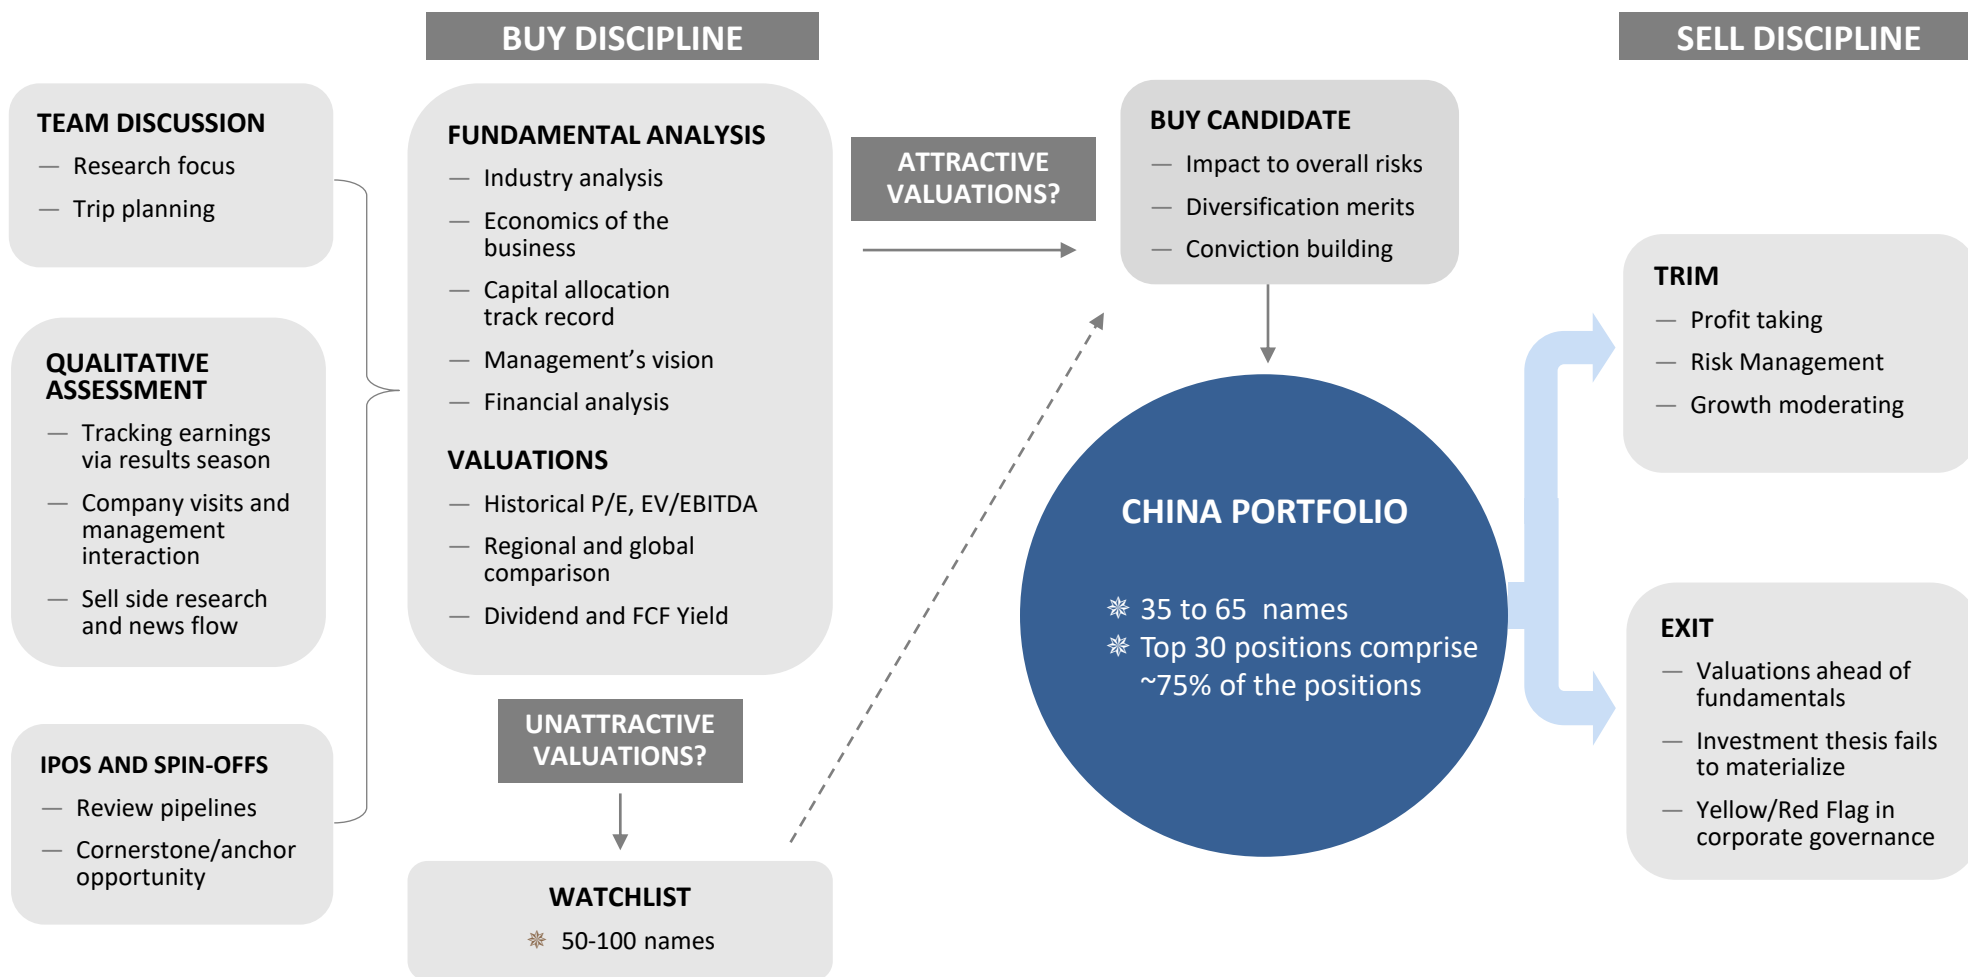

- Short-term cash flow predictability**
Cash flows are less predictable but backed by compelling investment opportunities
- Property
 - Wealth Management

FUNDAMENTAL ANALYSIS

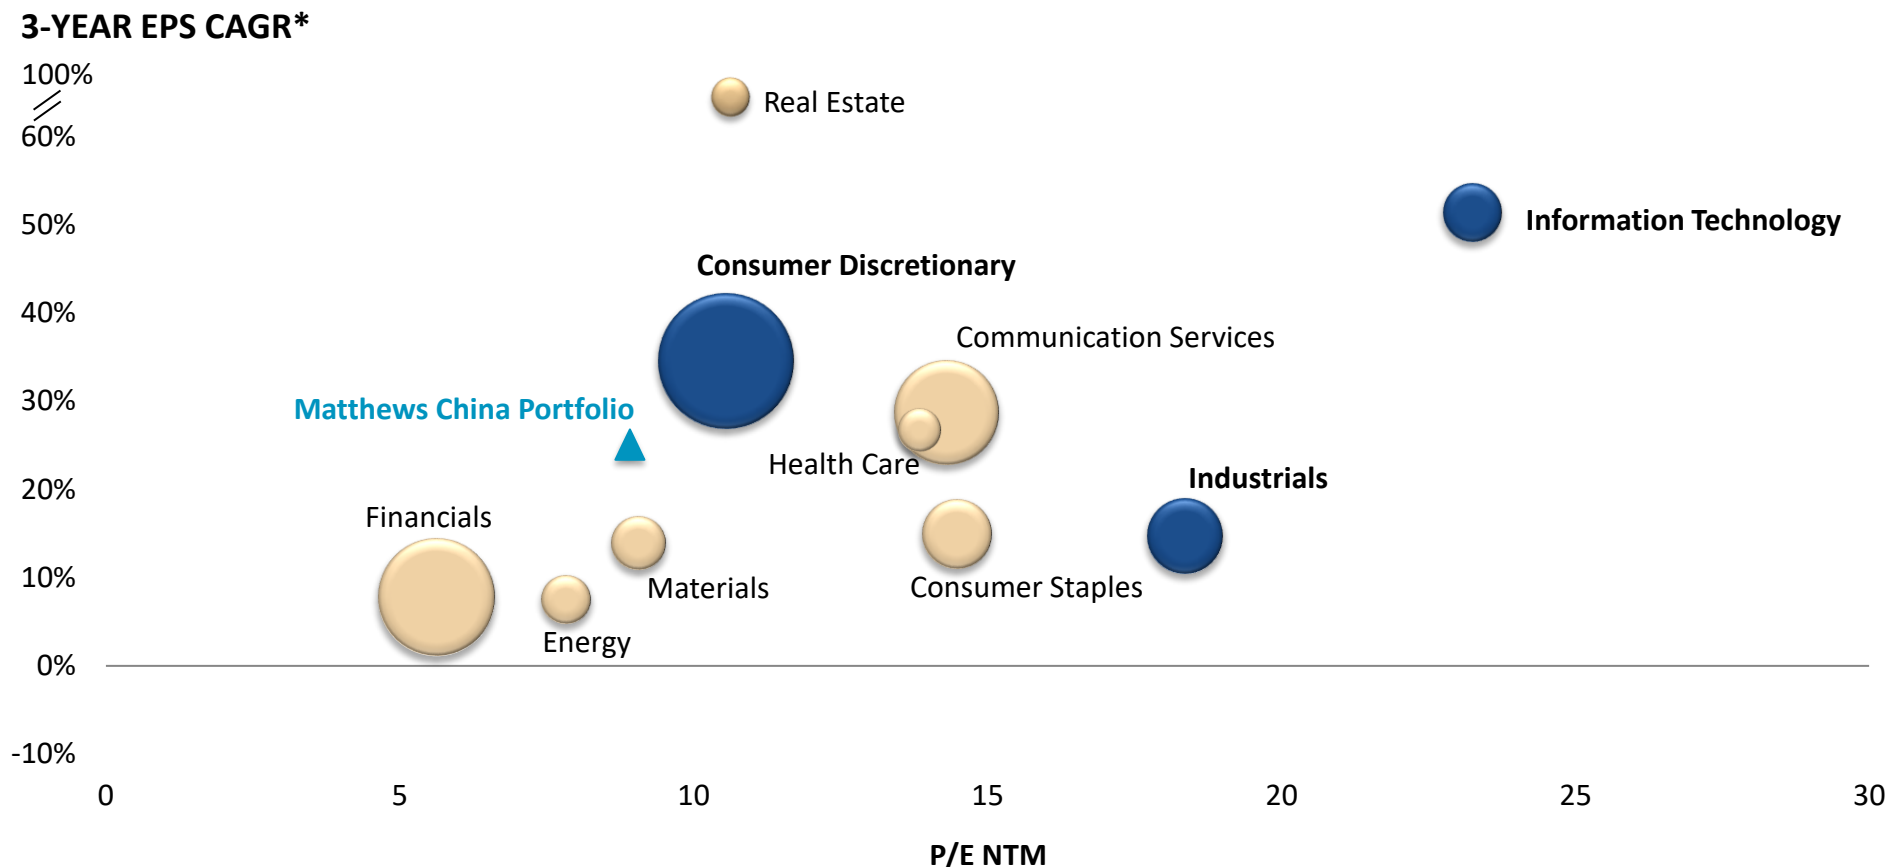

- On the ground company visits
- Proprietary research models
- Competitive advantage
- Consistency of earnings delivery
- Priced under long term intrinsic value
- Continuous monitoring

Buy/ Sell Discipline

Why Matthews China—We Invest in Structural Growth Sectors

*CAGR=Compound Annual Growth Rate

Note: The portfolio has a 0.1% weighting in Cash as of June 30, 2024

Each bubble represents a plotting of the weighted averages for the noted data for the portfolio companies as grouped by GICS sector. The 3 year forward estimated EPS CAGR and P/E ratio data as of June 30, 2024 are for all securities held in the portfolio. Bubble sizes are in proportion to the portfolio weight percentage. There is no guarantee that the composition of the portfolio will remain unchanged. The forward price per earnings ratio ("Forward P/E") is calculated by dividing the market price per share by the forecasted earnings per share for the next 12 months using weighted harmonic mean and excludes negative figures. There is no guarantee any estimates or projections will be realized.

Investment Returns | Matthews China Fund

As of June 30, 2024

AVERAGE ANNUAL TOTAL RETURNS

Assumes reinvestment of all dividends and/or distributions before taxes. All performance quoted represents past performance and is no guarantee of future results. Investment return and principal value will fluctuate with market conditions so that when redeemed, shares may be worth more or less than their original cost. Current performance may be lower or higher than the return figures quoted. Returns would have been lower if certain of the Fund's fees and expenses had not been waived. For the Fund's most recent month-end performance visit matthewsasia.com. Indexes are unmanaged and it is not possible to invest directly in an index. Please refer to disclosures for index definitions.

Second Quarter 2024

Published Portfolio Return ¹	2.39%
Published Benchmark Return	7.16%
Published Relative Return ²	-4.77%
Attributable Portfolio Return	2.42%
Attributable Relative Return	-4.74%

1 Published portfolio return represents that of the Investor Share Class.

2 The published relative return is calculated as the difference of the published benchmark return from the published portfolio return.

Benchmark: MSCI China Index

The attribution report shows the extent to which the portfolio manager's strategies affect a fund's performance relative to the performance of the fund's benchmark index. Allocation Effect shows the effect on fund performance of either over- or under-weighting a market (a sector, country or region, depending on the type of fund) relative to its benchmark. Selection + Interaction Effect shows how the decision to hold individual securities within the particular sector, country or region performed relative to the benchmark.

Attributed performance is calculated using FactSet Research Systems, Inc. The methodology of calculation is different from the published NAV and will not match performance based on the published NAV. Performance shown is historical and no guarantee of future results. Current performance may be lower or higher. Returns current to the most recent month-end are available at matthewsasiasia.com. Investment returns and principal value will fluctuate so that when redeemed, shares may be worth more or less than their original cost. Benchmark performance is unaudited.

Please refer to the disclosures for index definition. Unassigned may include fees, expense accruals, offsets, warrants and rights.

	Average Portfolio Wt	Average Benchmark Wt	Allocation Effect	Selection + Interaction Effect	Total Effect

Attribution Disclosure

Performance attribution reports are calculated with a holdings-based methodology using software supplied by FactSet Research Systems, Inc. The performance shown will not equate to the standard, published performance for the Fund. The quarterly or annual periods shown in the attribution reports should be considered short-term, while it is appropriate to have a long-term horizon when investing in a mutual fund. Fund performance should be evaluated over such a long-term horizon. Relative performance in a particular sector or country over a short period, and relative performance due to asset allocation or stock selection over a short period is no indication or guarantee of performance over longer time horizons. The sector or country allocation shown may not be representative of the Fund's current or future investments. None of the data displayed should be considered as a recommendation.

Matthews China Fund Investment Team

ANDREW MATTOCK, CFA

Andrew Mattock is a Portfolio Manager at Matthews and manages the firm's China, China Small Companies, China A-Share and China Discovery Strategies and co-manages the Pacific Tiger, China Dividend and Emerging Markets Equity Strategies. Prior to joining Matthews in 2015, he was a Fund Manager at Henderson Global Investors for 15 years, first in London and then in Singapore, managing Asia Pacific equities. Andrew holds a Bachelor of Business majoring in Accounting from ACU. He began his career at PricewaterhouseCoopers and qualified as a Chartered Accountant.

The MSCI Europe Small Cap Index captures small cap representation across the 15 Developed Markets (DM) countries in Europe. With 985 constituents, the index covers approximately 14% of the free float-adjusted market capitalization in the European equity universe.

The MSCI Frontier Markets Index captures large and mid cap representation across 29 Frontier Markets (FM) countries. The index includes 110 constituents, covering about 85% of the free float-adjusted market capitalization in each country.

The MSCI India Index is a free float-adjusted market capitalization index that is designed to measure the performance of the large and mid -cap segments of the Indian market.

The MSCI India Small Cap Index is designed to measure the performance of the small cap segment of the Indian market. With 253 constituents, the index represents approximately 14% of the free float-adjusted market capitalization of the India equity universe.

The MSCI Japan Index is a free float-adjusted market capitalization-weighted index of Japanese equities listed in Japan. The MSCI Japan Value Index captures large and mid cap Japanese securities exhibiting overall value style characteristics. The value investment style characteristics for index construction are defined using three variables: book value to price, 12-month forward earnings to price and dividend yield. With 173 constituents, the index targets 50% coverage of the free float-adjusted market capitalization of the MSCI Japan Index.

The MSCI Japan Growth Index is a free-float weighted equity index.

The MSCI Japan Small Cap Index is designed to measure the performance of the small cap segment of the Japanese market. With 926 constituents, the index represents approximately 14% of the free float-adjusted market capitalization of the Japan equity universe.

The MSCI Japan Value Index captures large and mid cap Japanese securities exhibiting overall value style characteristics. The value investment style characteristics for index construction are defined using three variables: book value to price, 12-month forward earnings to price and dividend yield. With 176 constituents, the index targets 50% coverage of the free float-adjusted market capitalization of the MSCI Japan Index.

The Korea Composite Stock Price Index (KOSPI) is a capitalization-weighted index of all common stocks listed on the Korea Stock Exchange.

The MSCI United Kingdom Index is a free float-adjusted market capitalization index designed to measure the performance of the large and mid-cap segments of the UK market.

The MSCI USA Index is a free float adjusted market capitalization index that is designed to measure large and mid cap US equity market performance.

The MSCI USA Small Cap Index is designed to measure the performance of the small cap segment of the US equity market. With 1,782 constituents, the index represents approximately 14% of the free float-adjusted market capitalization in the US.

The Russell 2000 index is an index measuring the performance approximately 2,000 small-cap companies in the Russell 3000 Index, which is made up of 3,000 of the biggest U.S. stocks. The Russell 2000 serves as a benchmark for small-cap stocks in the United States. The weighted average market capitalization for companies in the Russell 2000 is about US\$1.3 billion and the index itself is frequently used as a benchmark for small-cap mutual funds.

The S&P 500 Index is a broad market-weighted index dominated by blue-chip stocks in the U.S.

The S&P Bombay Stock Exchange 100 (S&P BSE 100) Index is a free float-adjusted market capitalization-weighted index of 100 stocks listed on the Bombay Stock Exchange.

The SSE Composite Index also known as SSE Index is a stock market index of all stocks that are traded at the Shanghai Stock Exchange.

The Shanghai Stock Exchange Composite Index is a capitalization-weighted index. The index tracks the daily price performance of all A-shares and B-shares listed on the Shanghai Stock Exchange.

The STOXX Europe 600 Index is derived from the STOXX Europe Total Market Index (TMI) and is a subset of the STOXX Global 1800 Index. With a fixed number of 600 components, the STOXX Europe 600 Index represents large, mid and small capitalization companies across 18 countries of the European region: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

The Tokyo Stock Price Index (TOPIX) is a capitalization-weighted index of all companies listed on the First Section of the Tokyo Stock Exchange.

The TOPIX Small Index is a capitalization-weighted index designed to measure the performance of the stocks listed on the First Section of the Tokyo Stock Exchange, excluding the TOPIX 500 stocks and non-eligible stocks.

Indexes are unmanaged and it is not possible to invest directly in an index.

Glossary

CAGR (Compound Annual Growth Rate) is the year-over-year growth rate of an investment over a specified period of time.

DCF (Discounted Cash Flow) is a valuation method used to estimate the attractiveness of an investment opportunity. DCF analysis uses future free cash flow projections and discounts them to arrive at a present value estimate, which is used to evaluate the potential for investment.

EBIT Margin (Earnings Before Interest and Taxation Margin) is a profitability measure equal to EBIT divided by net revenue. This value is useful when comparing multiple companies, especially within a given industry, and also helps evaluate how a company has grown over time.

EBITDA (Earnings Before Interest and Taxation, Depreciation and Amortization) is a measure of a company's earnings before considering the financing of that company (the share of equity capital and debt employed), and disregarding potential depreciation and amortization policies, which can be very different. EBITDA allows like-for-like comparisons between different companies' performance.

EPS (Earnings per Share) is the amount of annual profit (after tax and all other expenses) attributable to each share in a company. EPS is calculated by dividing profit by the average number of shares on issue.

EVA (Economic Value Added) is a measure of a company's financial performance based on the residual wealth calculated by deducting cost of capital from its operating profit (adjusted for taxes on a cash basis).

EV/EBITDA (Enterprise Multiple) is a ratio used to determine the value of a company. The enterprise multiple looks at a firm as a potential acquirer would, because it takes debt into account - an item which other multiples like the P/E ratio do not include.

EV (Enterprise Value) is a measure of a company's value, often used as an alternative to straightforward market capitalization. Enterprise value is calculated as market cap plus debt, minority interest and preferred shares, minus total cash and cash equivalents.

FCF (Free Cash Flow) is a measure of financial performance calculated as operating cash flow minus capital expenditures. Free cash flow (FCF) represents the cash that a company is able to generate after laying out the money required to maintain or expand its asset base.

Forward P/E (Forward Price to Earnings) is a measure of the price-to-earnings ratio (P/E) using forecasted earnings for the P/E calculation. While the earnings used are just an estimate and are not as reliable as current earnings data, there still may be benefit in estimated P/E analysis. The forecasted earnings used in the formula can either be for the next 12 months or for the next full-year fiscal period.

Gross Margin is a company's total sales revenue minus its cost of goods sold, divided by the total sales revenue, expressed as a percentage. The gross margin represents the percent of total sales revenue that the company retains after incurring the direct costs associated with producing the goods and services sold by a company.

Net Margin is the ratio of net profits to revenues for a company or business segment—typically expressed as a percentage—that shows how much of each dollar earned by the company is translated into profits. It is calculated by dividing net profit by revenue.

Operating Margin is a ratio used to measure a company's pricing strategy and operating efficiency. Operating margin is a measurement of what proportion of a company's revenue is left over after paying for variable costs of production.

P/E Ratio (Price-to-Earnings Ratio) is a valuation ratio of a company's current share price compared to its per-share earnings, calculated as marketing value per share divided by earnings per share (EPS).

P/B Ratio (Price-to-Book Ratio) is used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share. A lower P/B ratio could mean that the stock is undervalued.

PPP (Purchasing Power Parity) is an economic theory that estimates the amount of adjustment needed on the exchange rate between countries in order for the exchange to be equivalent to each currency's purchasing power.

ROE (Return on Equity) is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested, and is calculated as net income divided by shareholder's equity.

ROIC (Return on Invested Capital) is a calculation used to assess a company's efficiency at allocating the capital under its control to profitable investments. The return on invested capital measure gives a sense of how well a company is using its money to generate returns.
